Preface

This report presents preliminary population figures for the 2022 Population and Housing Census (PHC) which was held from 21st to 30th April 2022. The census was the first such undertaking by Zimbabwe National Statistics Agency (ZIMSTAT) using the Computer Assisted Personal Interview (CAPI) method. This migration from Paper Assisted Personal Interview (PAPI) to CAPI, saw ZIMSTAT, for the first time, producing preliminary results of a census within three months of data collection.

The census was conducted using the *de facto* approach. This entailed enumeration of individuals in households where they spent the census night, that is the night of 20th April 2022, regardless of their usual places of residence. Preparations of the census began in 2019, being guided by the United Nations Principles and Recommendations for Population and Housing Censuses, Revision 3.

The advent of COVID-19 in 2020 interrupted the mapping exercise and supply chains which were critical components of the preparatory phase of the census. ZIMSTAT lost ten months of preparatory work as we complied with COVID-19 lockdown restrictions. However, through availing of more resources by Government and exceptional commitment by Team ZIMSTAT, the 21st April 2022 timeline was met comfortably.

The results presented in this report are on population size and structure by province, district and ward. Information is also provided on annual population growth rates and population density. This publication is the first in a series of subsequent reports on the remaining modules of the 2022 Population and Housing Census.

I would like to express my profound gratitude to the Government of Zimbabwe, Development Partners, all stakeholders, the media, technical staff and respondents who made this census a success.

Taguma Mahonde
Director-General

Harare, July 2022

1. Introduction

Zimbabwe follows a decennial census cycle of which the 2022 Population and Housing Census marked the 5th since Independence (1980), having conducted the last in August 2012. The 2022 Population and Housing Census was the first digital census to be conducted in Zimbabwe, in line with United Nations Principles and Recommendations for Population and Housing Censuses, Revision 3.

1.1 Census Objectives

The main objective of the 2022 Population and Housing Census was to provide current information on demographic, social, economic and environmental characteristics of the population at national and sub-national levels.

The specific objectives of the 2022 Population and Housing Census were to:

- a) Establish the size and structure of the population of Zimbabwe, with regard to spatial distribution in the provinces, districts and wards;
- b) Provide demographic, social, economic, environmental and cultural characteristics;
- c) Determine rate of population growth;
- d) Establish population density; and
- e) Create an updated sampling frame for use in surveys up to 2032.

1.2 Data Confidentiality

Census data was collected in terms of the Census and Statistics Act of 2007. In accordance with the act, enumerators are required to uphold confidentiality on information provided during enumeration. Further, census data is reported in aggregated form to ensure that data collected from individual respondents remains unidentifiable.

2. Methodology

Census operations were divided into three major phases namely:

- a) Pre-Enumeration;
- b) Enumeration; and
- c) Post-Enumeration.

Preparations for the 2022 Population and Housing Census began with the mapping exercise in November 2019.

2.1 Pre-enumeration Phase

Mapping

The mapping exercise entailed sub-dividing the country into 40,828 Enumeration Areas (EAs), following the spatially defined ward boundaries. This exercise was undertaken in order to:

- a) establish defined boundaries within which each enumerator operates;
- b) ensure that gaps and overlaps are eliminated; and
- c) help determine personnel, material and logistical requirements for census enumeration.

Census Committees

Census committees at national, provincial and district levels with defined terms of reference were set up for the planning and execution of the census. The National Census Coordination Committee comprised 12 ministers and was chaired by the Minister of Finance and Economic Development, Hon. Professor Mthuli Ncube. This committee was assisted by a Technical Working Group comprising Permanent Secretaries under the chairmanship of Secretary for Finance and Economic Development, Mr G.T. Guvamatanga. These two national committees were replicated at provincial and district levels and were chaired by Secretaries for Provincial Affairs and Devolution as well as District Development Coordinators, respectively.

Census Instrument

The development of the questionnaire was through a consultative process whereby stakeholders were engaged to provide their inputs into the questionnaire content. After designing the questionnaire, a Computer Assisted Personal Interview (CAPI) system was developed using CSPro Version 7.2. The CAPI system was rigorously tested for relevance, clarity, consistency and completeness, before finalisation and adoption.

The census questionnaire collected information on the following sections:

- a) Identification of household;
- b) Demographic characteristics of household members;
- c) Functioning for persons 3 years and above;
- d) Education for persons 3 years and above;
- e) Labour force for persons 10 years and above;
- f) Fertility for women 10-49 years;
- g) Housing characteristics and living conditions;
- h) Emigration from the household;

- i) Deaths in the household in the past 12 months; and
- j) Summary and household details.

Shorter versions of the questionnaire were developed to cater for special population categories such as camping sites, prisons, hospitals and hotels.

Quality Checks During Pre-enumeration

To avoid inconsistencies during data collection, the CAPI system was developed with inbuilt checks to enhance logic, skip patterns and consistency during interviewing.

Pilot Census

The pilot census was conducted in all provinces in November 2021 to measure technical, logistical and administrative preparedness.

Publicity

Various census publicity campaign tools were utilised including the following;

- a) Radio and television advertisements;
- b) In-store advertisements;
- c) Social media advertisements;
- d) Distribution of information, Education and communications materials such as flyers, posters and brochures in local languages;
- e) District publicity tours;
- f) Road shows and marches; and
- g) Press conferences and interviews.

Recruitment and Training

A total of 51,319 census personnel were recruited and trained for the 2022 Population and Housing Census. The personnel comprised enumerators and their trainers cum supervisors. Three training workshops were conducted namely training of provincial and district level supervisors, enumeration area supervisors and enumerators. The workshops were conducted mainly to acquaint personnel with census objectives, census concepts and definitions, questionnaire content, classifications and fieldwork procedures, among other census matters. The training workshops also provided an opportunity to test the CAPI system and the process of syncing data to the server.

Four manuals were used during trainings. The first was the enumerator manual containing information that guided enumerators on how to conduct census enumeration. The supervisor manual provided steps to be followed by field supervisors when supervising enumerators during

data collection. The trainers guide was developed to provide instructions to trainers on how to use the enumerator manual and other instruments for training. The classification manual contained three guidelines namely:

- a) International Standard Classification of Education (ISCED 2011);
- b) International Standard Classification of Occupations (ISCO-08); and
- c) International Standard Industrial Classification of All Economic Activities (ISIC Revision 4).

Training of enumerators was completed on 18th April 2022 and deployment of enumerators and supervisors commenced, to undertake reconnaissance, local area publicity and data collection.

2.2 Enumeration Phase

Method of Enumeration

The 2022 Population and Housing Census was conducted on a *de facto* basis, relating to the night of 20th April 2022. This means that all persons who spent the night of 20th April in Zimbabwe were enumerated, irrespective of their citizenship, nationality or residence status. Accordingly, all other persons who were out of the country on the census night were not enumerated.

Data Collection

Enumeration began on the census night, with special population categories such as the homeless, persons in transit, camping sites, prisons, hospitals, hotels and other unstable population categories. From 21st to 30th April 2022, enumeration of persons in private and collective households such as children's homes was conducted.

The census was administered using Computer Assisted Personal Interviewing method. The approach entailed enumerators visiting households and conducting face-to-face interviews while recording responses in tablets.

The collected data was transmitted to the server on a daily basis. This provided an opportunity for census personnel to perform initial data cleaning whilst the census was in progress. Any issues emanating from the synchronized data were communicated back to the field staff for rectification, after which re-synching would take place.

Field Quality Control Measures

At national level, a census dashboard was set up to provide real time monitoring of census fieldwork. Provincial, district and enumeration area supervisors were deployed to carry out quality

control spot checks and re-interviews in the field, to avoid the following errors associated with fieldwork:

- a) over-coverage and under-coverage;
- b) erroneous inclusions and exclusions;
- c) interviewer falsifications; and
- d) interviewer bias.

2.3 Post Enumeration Phase

Data Processing

The post enumeration phase entailed data cleaning and processing.

Data Quality Management

Given that each phase of the census operations can introduce errors, a Data Quality Management Team was established as a way of improving quality of the data; to undertake the following activities:

- a) checking for validity, consistency and completeness, using software that included Excel, SAS and SPSS;
- b) overlaying of Global Positioning System (GPS) coordinates of all households to check on coverage;
- c) checking of errors by Data Quality Monitors in post enumeration phase; and
- d) ensuring rectification of errors.

Tabulation

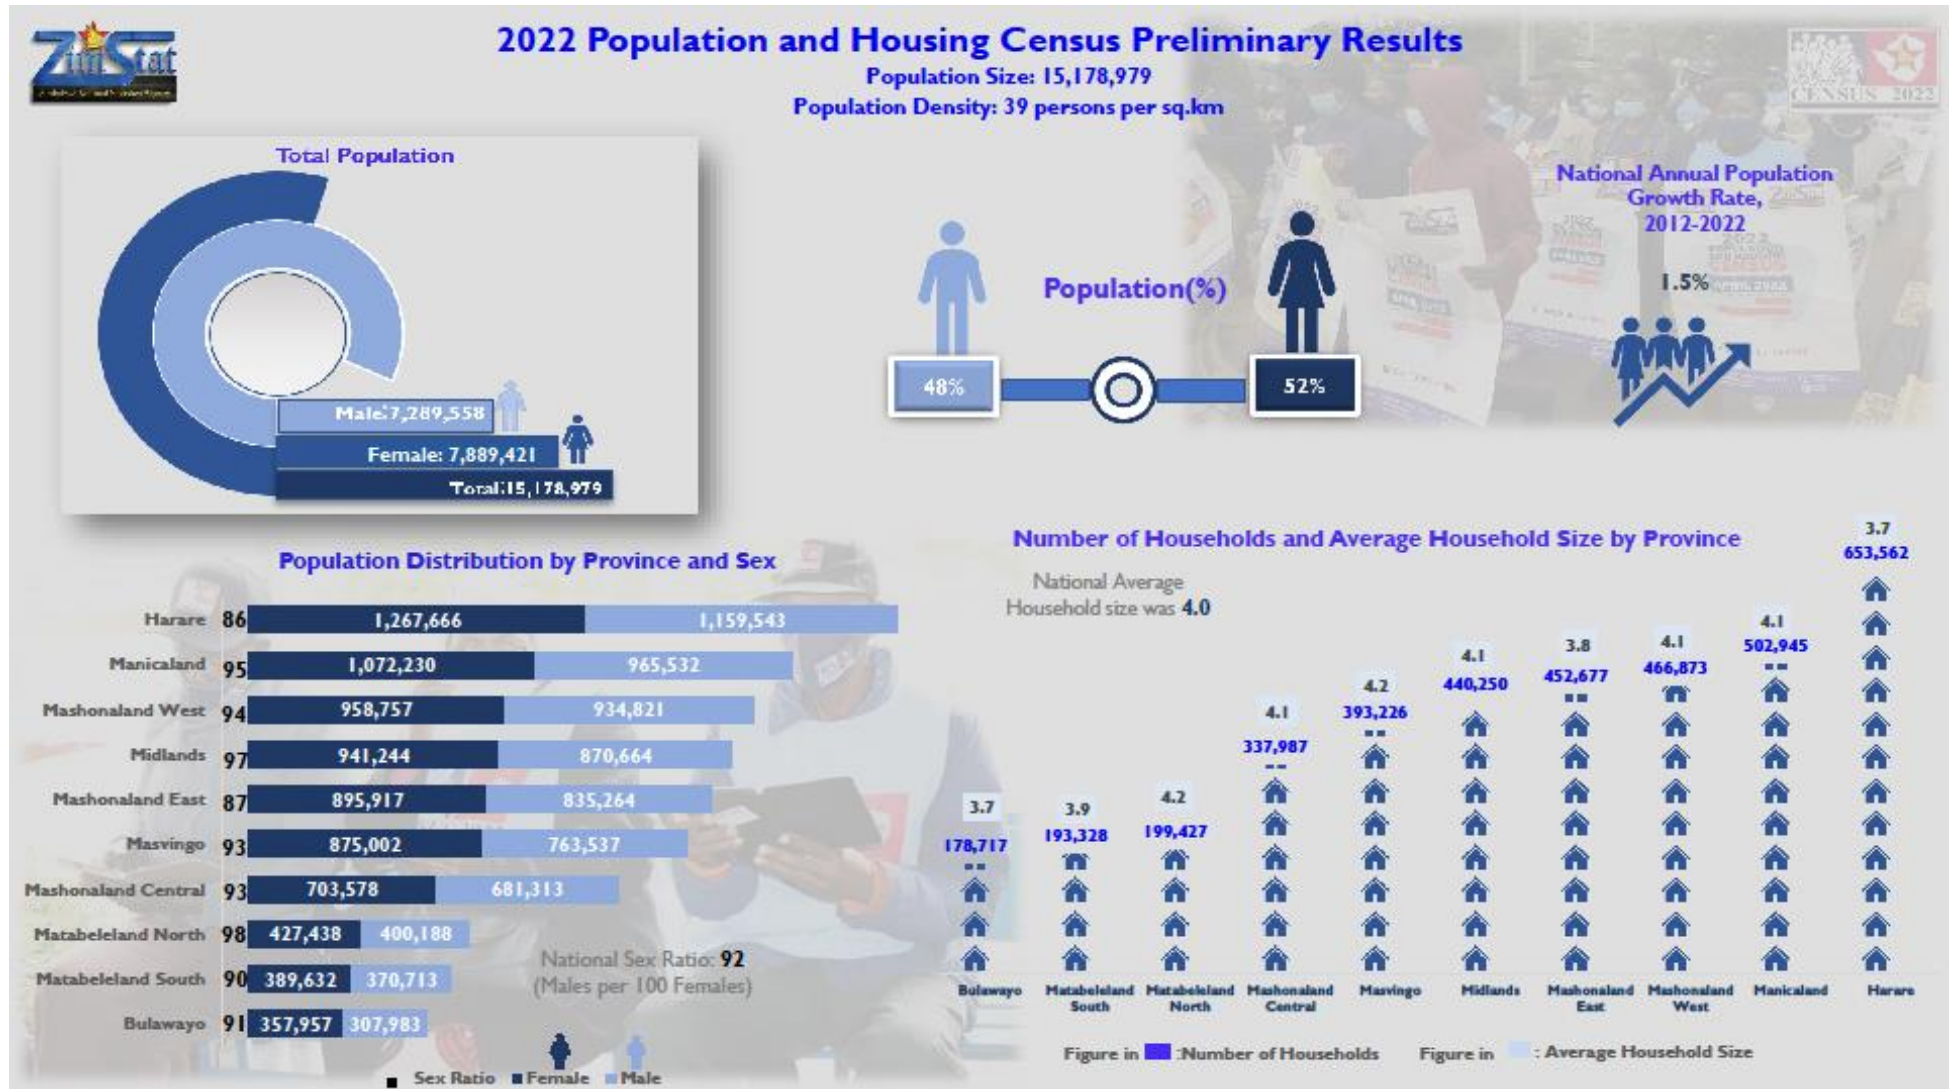

The results of the census were compiled in tabular form using SAS and Excel.

Report Writing and Dissemination

After tabulation, report writing was undertaken resulting in dissemination of census results.

3. Preliminary Results

3.1 Highlights of Results

3.2 Population Size

The population of Zimbabwe as at 20th April 2022 was **15,178,979**, of which **7,289,558** (48%) were male and **7,889,421** (52%) were female, giving a sex ratio of **92** males for every 100 females. Given the 2012 population size of 13,061,329, this gives an annual population growth rate of **1.5** percent. The population constituted **3,818,992** households, giving an average of **4** persons per household. Given a land area of 390,757 square kilometres, the resultant population density stood at **39** persons per square kilometre.

3.3 Distribution of Population by Province

The distribution of the population by province for the year 2022 indicates that Harare Province constituted 16 percent of the total population, followed by Manicaland and Mashonaland West Provinces with 13.4 and 12.5 percent respectively (*Figure 1.1*).

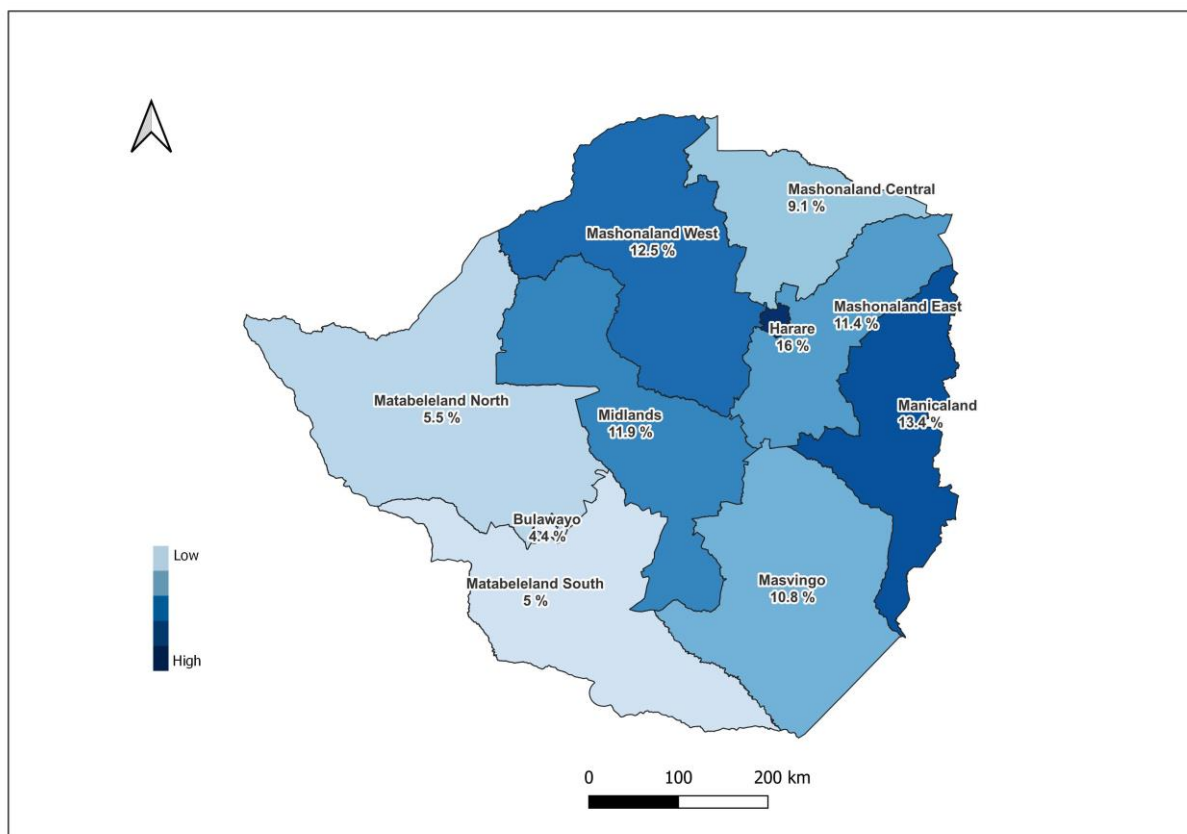

Figure 1.1: Population Distribution by Province

The distribution of the population by province for year 2022 indicates that Harare Province had 2,427,209 persons. Manicaland and Mashonaland West Provinces had 2,037,762 and 1,893,578 persons respectively. In all provinces, the female population was higher than the male population (*Figure 1.2*).

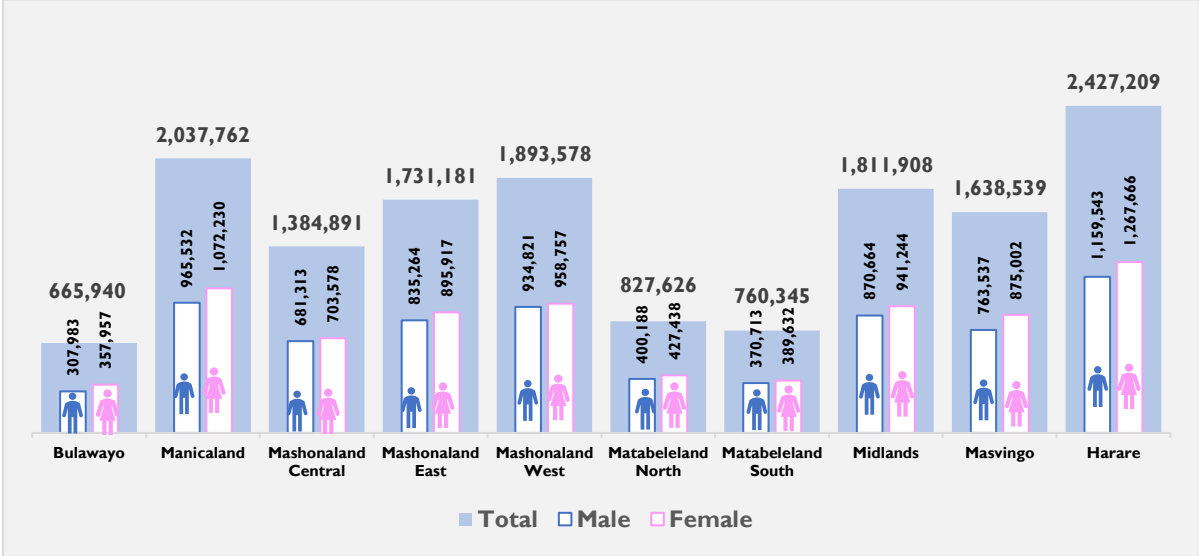

Figure 1.2: Population Distribution by Province and Sex

Figure 1.3 shows the sex ratios by province. The ratios ranged from 86 males per 100 females in Bulawayo Province to 98 males per 100 females in Mashonaland West Province.

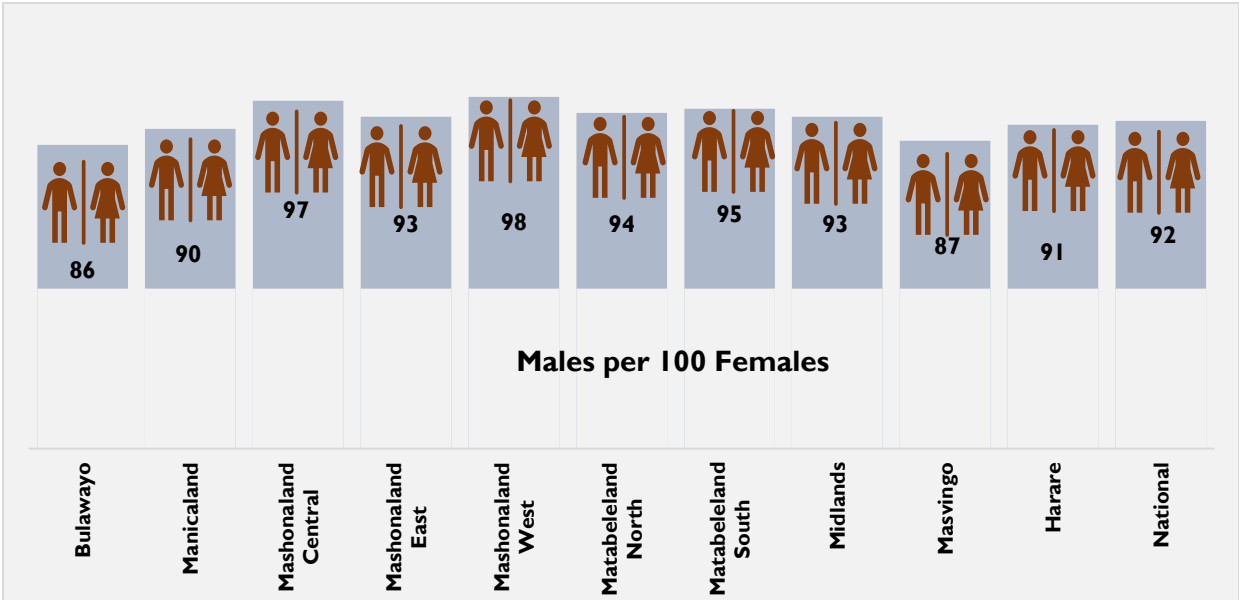

Figure 1.3: Sex Ratios by Province

3.4 Distribution of Households by Province

The distribution of households shows that Harare Province had 653,562 households followed by Manicaland and Mashonaland West Provinces with 502,945 and 466,843 respectively. Masvingo Province had the highest average household size of 4.17 followed by Matabeleland North Province with 4.15 (Figure 1.4).

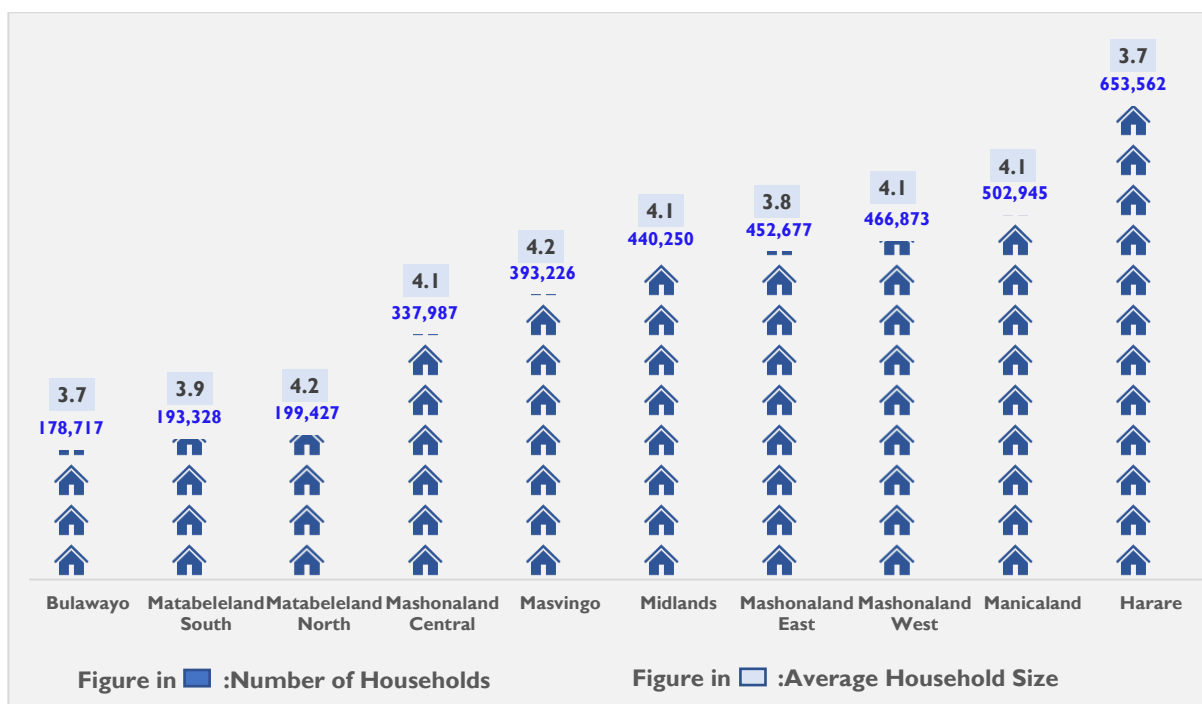

Figure 1.4: Number of Households and Average Household Size by Province

The distribution of households shows that Harare Province had 17.1 percent of the households. Manicaland Province had 13.2 percent and Mashonaland West Province had 12.2 percent. (Figure 1.5)

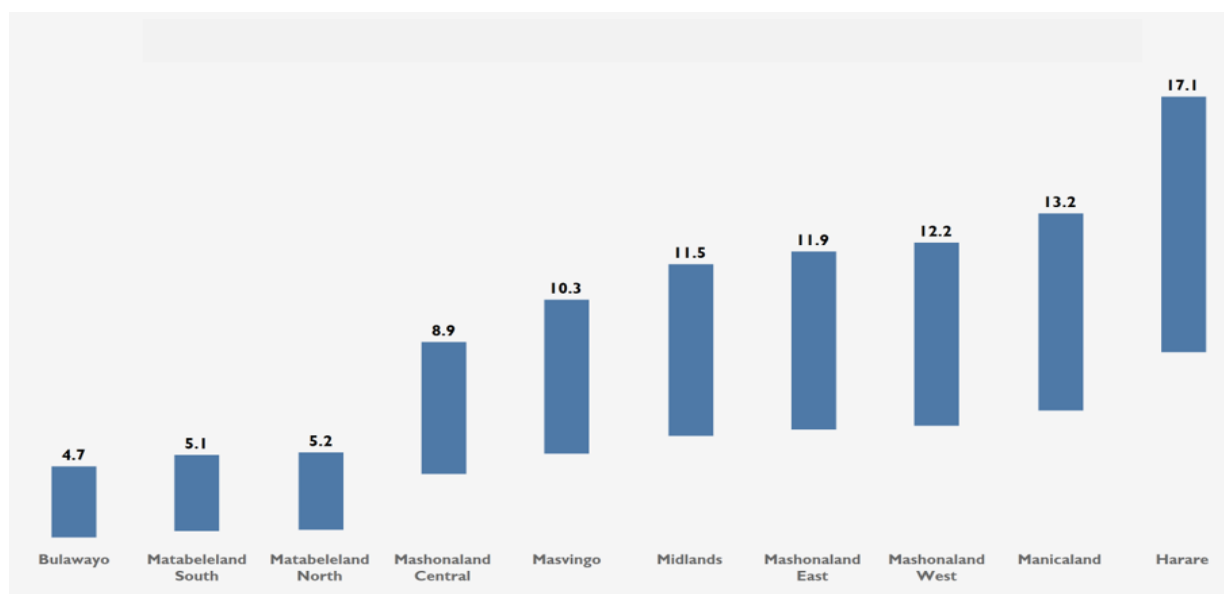

Figure 1.5: Household Distribution by Province (%)

3.5 Annual Population Growth Rate by Province, 2012-2022

The national annual population growth rate between 2012 and 2022 was 1.5 percent. Mashonaland East and West Provinces had annual population growth rates of 2.9 and 2.6 percent respectively (*Figure 1.6*).

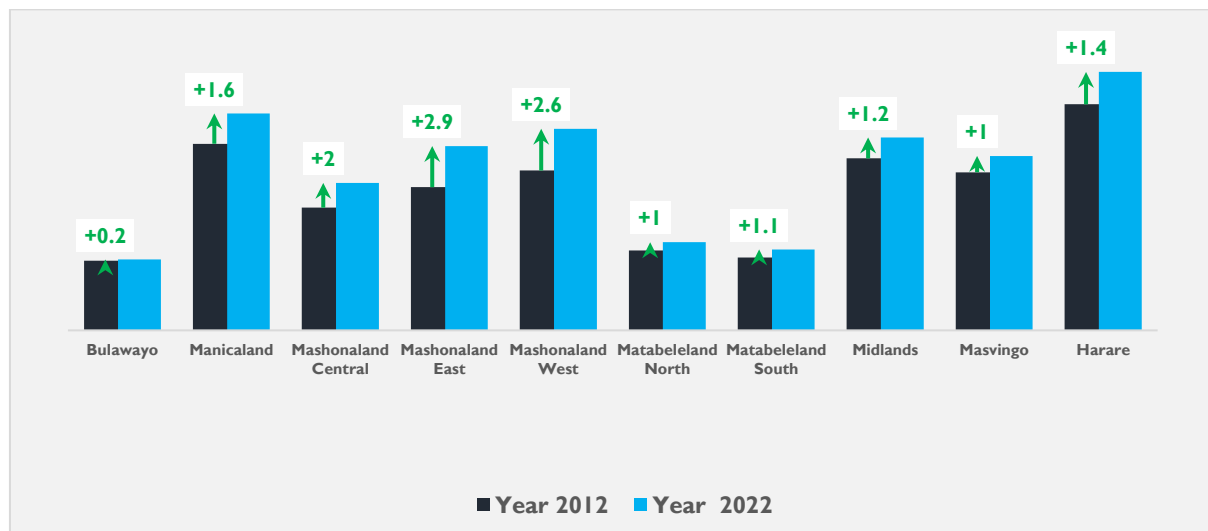

Figure 1.6: Annual Population Growth Rates by Province, 2012-2022

3.6 Population Density by Province

The number of persons per square kilometre in Harare Province was 2,783. Bulawayo Province had 1,390 persons per square kilometre and Manicaland Province had 56 persons per square kilometre (*Figure 1.7*).

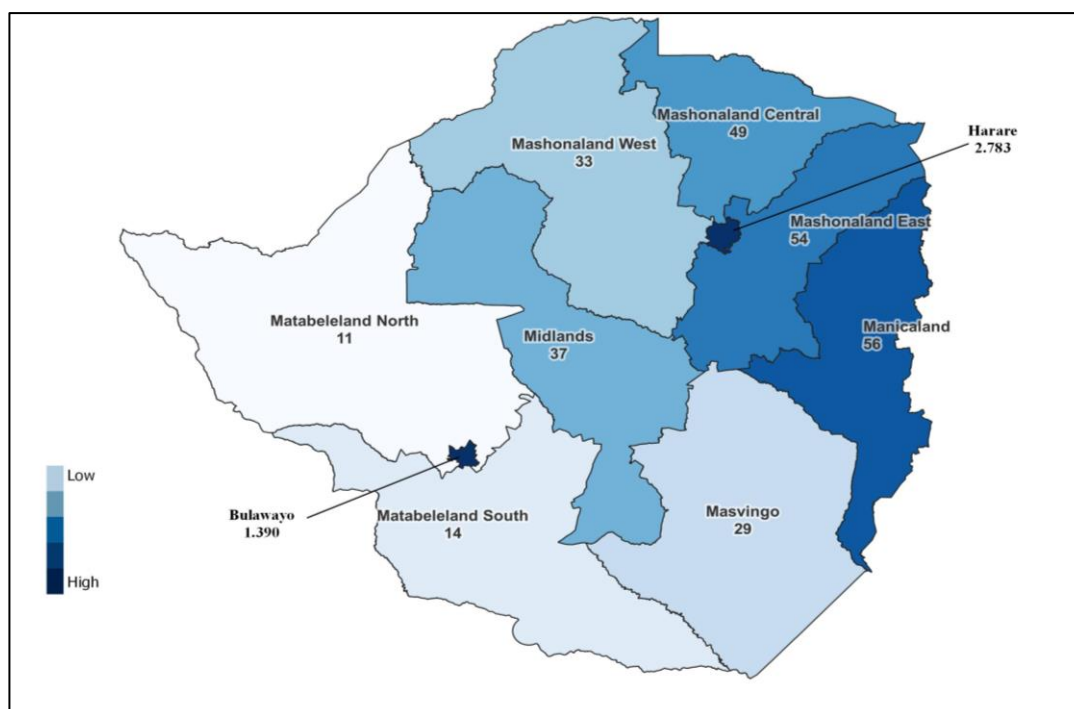

Figure 1.7: Population Density by Province

3.7 Population Distribution by Rural and Urban Areas

The majority of the population in the country was in rural areas (61.4%).
