COMMUNITY-BASED GBV SURVEILLANCE SYSTEM

Data Report #1
June 1st 2017-March 31st 2018

What is the GBV Surveillance System

The GBV Surveillance system is a community based GBV Prevalence Data collection system, launched by UNFPA in 2017 in partnership with the Behaviour Change Programme, with the aim of addressing the challenge of a limited National GBV information management system. The first report of the Surveillance system reflects findings of data collected in 20 pilot districts within 5 provinces, while showcasing the effectiveness of the community-based approach to GBV Data generation.

Key Findings

GBV Types

41% Physical Violence
17% Sexual Violence
30% Emotional Violence

Perpetrators

In 41% of cases, perpetrator is the spouse or intimate partner

Religious Affiliation

34% of GBV Survivors belong to Apostolic faith

Access to Services

64% of SGBV survivors accessed Health Facilities. 35% reported within 72h

Total 1,846 people reported having experienced GBV. 78% of the total are in the age range 15 - 49 years. 78% are Female, 22% are Male

1. Equip women and girls with the knowledge, information and tools to demand quality and acceptable multi-sectoral GBV services

2. Enhance behaviour change interventions to influence communities towards behaviour change and social norms, shifting and promote gender equality and zero tolerance to GBV, with particular focus on men and boys and faith leaders engagement

3. Strengthen the capacity of women and girls to participate in productive economic sectors, as a strategy to reduce economic dependence from intimate partner violence and enhance their willingness to report GBV cases
